An award-winning journalist ' s dramatic account of a shooting that shook a community to its core, with important implications for the future On the last evening of summer in 2013, five shots rang out in a part of northeast Denver known as the Holly. Long a destination for African American families fleeing the Jim Crow South, the area had become an " invisible city " within a historically white metropolis. While shootings there weren ' t uncommon, the identity of the shooter that night came as a shock. Terrance Roberts was a revered anti-gang activist. His attempts to bring peace to his community had won the accolades of both his neighbors and the state ' s most important power brokers. Why had he just fired a gun? In The Holly, the award-winning Denver-based journalist Julian Rubinstein reconstructs the events that left a local gang member paralyzed and Roberts facing the possibility of life in prison. Much more than a crime story, The Holly is a multigenerational saga of race and politics that runs from the civil rights movement to Black Lives Matter. With a cast that includes billionaires, elected officials, cops, developers, and street kids, the book explores the porous boundaries between a city ' s elites and its most disadvantaged citizens. It also probes the fraught relationships between police, confidential informants, activists, gang members, and ex – gang members as they struggle to put their pasts behind them. In The Holly, we see how well-intentioned efforts to curb violence and improve neighborhoods can go badly awry, and we track the interactions of law enforcement with gang members who conceive of themselves as defenders of a neighborhood. When Roberts goes on trial, the city ' s fault lines are fully exposed. In a time of national reckoning over race, policing, and the uses and abuses of power, Rubinstein offers a dramatic and humane illumination of what ' s at stake.

An enlightening narrative exploring an oft-overlooked aspect of the sixteenth president's life, An American Marriage reveals the tragic story of Abraham Lincoln ' s marriage to Mary Todd. Abraham Lincoln was apparently one of those men who regarded " connubial bliss " as an untenable fantasy. During the Civil War, he pardoned a Union soldier who had deserted the army to return home to wed his sweetheart. As the president signed a document sparing the soldier's life, Lincoln said: " I want to punish the young man—probably in less than a year he will wish I had withheld the pardon. " Based on thirty years of research, An American Marriage describes and analyzes why Lincoln had good reason to regret his marriage to Mary Todd. This revealing narrative shows that, as First Lady, Mary Lincoln accepted bribes and kickbacks, sold permits and pardons, engaged in extortion, and peddled influence. The reader comes to learn that Lincoln wed Mary Todd because, in all likelihood, she seduced him and then insisted that he protect her honor. Perhaps surprisingly, the 5 ' 2 " Mrs. Lincoln often physically abused her 6 ' 4 " husband, as well as her children and servants; she humiliated her husband in public; she caused him, as president, to fear that she would disgrace him publicly. Unlike her husband, she was not profoundly opposed to slavery and hardly qualifies as the " ardent abolitionist " that some historians have portrayed. While she providid a useful stimulus to his ambition, she often " crushed his spirit, " as his law partner put it. In the end, Lincoln may not have had as successful a presidency as he did—where he showed a preternatural ability to deal with difficult people—if he had not had so much practice at home.

This extraordinary book explains the engine that has catapulted the Internet from backwater to ubiquity—and reveals that it is sputtering precisely because of its runaway success. With the unwitting help of its users, the generative Internet is on a path to a lockdown, ending its cycle of innovation—and facilitating unsettling new kinds of control. iPods, iPhones, Xboxes, and TiVos represent the first wave of Internet-centered products that can't be easily modified by anyone except their vendors or selected partners. These " tethered appliances " have already been used in remarkable but little-known ways: car GPS systems have been reconfigured at the demand of law enforcement to eavesdrop on the occupants at all times, and digital video recorders have been ordered to self-destruct thanks to a lawsuit against the manufacturer thousands of miles away. New Web 2.0 platforms like Google mash-ups and Facebook are rightly touted—but their applications can be similarly monitored and eliminated from a central source. As tethered appliances and applications eclipse the PC, the very nature of the Internet—its " generativity, " or innovative character—is at risk. The Internet's current trajectory is one of lost opportunity. Its salvation, Zittrain argues, lies in the hands of its millions of users. Drawing on generative technologies like Wikipedia that have so far survived their own successes, this book shows how to develop new technologies and social structures that allow users to work creatively and collaboratively, participate in solutions, and become true " netizens. "
