## 8085 Microprocessor Programming And Interfacing

Interfacing of 8085 with 8255

Programmable Peripheral Interface.

The 8255 is a programmable peripheral interface. It is an IC used to simplify the interfacing of microprocessors and microcontrollers with I/O devices and increase the number of I/O devices that can be interfaced. The best part is that it is programmable, which means that we don't have to change circuit connections and wiring in order to switch between different ports and modes of operation.
