The Save a Life Initiative has just released its newest course: Advanced Cardiac Life Support (ACLS). This manual is based on the 2015-2020 Advanced Cardiac Life Support guidelines published by the American Heart Association. The Advanced Cardiac Life Support (ACLS) Provider Handbook is a comprehensive resource intended for health care professionals currently enrolled in an Advanced Cardiac Life Support Certification or Recertification Course. It serves as the primary training material for ACLS Certification and Recertification courses. Although it is primarily intended for use during their courses, the handbook was also created to serve as daily reference material for health care professionals. Information covered in the handbook includes ACLS instruction for adults and children through multiple case scenarios. Case scenarios include, but are not limited to, respiratory arrest, ventricular fibrillation and bradycardia. Specific ACLS Algorithms and more are also included within the handbook. All material included in this handbook is delivered in a manner meant to enhance learning in the most comprehensive and convenient way possible.

20-1101

In the event of an adult cardiac arrest, it is essential to be able to respond rapidly, providing safe and effective care. This new and updated edition of Advanced Cardiac Life Support provides the theoretical background to resuscitation as well as explaining the essential resuscitation skills required to manage an adult cardiac arrest- from the time it occurs until subsequent transfer to the ICU. The emphasis is on the prevention of cardiac arrest with detailed information on the management of peri-arrest arrhythmias and acute coronary syndromes. Advanced Cardiac Life Support also discussed ethical and legal issues, record keeping, dealing with bereavement, audit, equipment and training- providing an essential quick reference tool for nurses and health care professionals. An evidence-based approach to emergency care based on the latest Resuscitation guidelines A succinct yet comprehensive guide to the management of cardiac arrest Written by an experienced resuscitation training offer who is also a qualified nurse and former CCU Charge Nurse

Developed out of the authors' numerous years of successful classroom instruction to hundreds of students in ACLS courses. This volume contains 14 chapters that provide the core information necessary to prepare a candidate for the American Heart Association's ACLS Provider course. Concepts are presented in a logical manner that allows the reader to progress from a foundation of basic core knowledge (first six chapters) to more complex case management material. As the chapters progress, the information, cases and algorithms become more complex, requiring integration of the knowledge gained in previous chapters. Continuous reinforcement is a critical aspect of this book and will give readers the understanding necessary to pass ACLS and the confidence to use it. The volume presents key concepts of advanced cardiac life support, systematic approach to emergency cardiac care, airway management, ventilation, and oxygen therapy, gaining intravenous access, monitoring and dysrhythmia recognition, 12-lead electrocardiographic interpretation, electrical therapy, pharmacological therapy, acute coronary syndromes, algorithms and emergency cardiac care protocols, prehospital cardiac emergency scenarios, acute stroke, special resuscitation situations and special treatment considerations in the prehospital environment. For paramedics and EMTs.
