Abstract When I agreed to review An Introduction to Underwater Acoustics I expected something like an updated version of Ocean Acoustics: Theory and Experiment in Underwater Sound by Tolstoy and Clay. This and other classics cover the basics well, and I wondered how the author could improve on their presentations.

Massachusetts Institute of Technology 2017. Let $p(x,t) = P_0 \sin(\omega t - kx)$ Insert this in the wave equation: $-\rho_0 \omega^2 \sin(\omega t - kx) = -[E / E_0] \rho_0 \omega^2 \sin(\omega t - kx) [E_0 / k^2] = E / \text{Wave speed } c^2 k^2 = [E_0 / E_0] \rho_0 \omega^2 \sin(\omega t - kx)$ This is sound speed in fluid, independent of pressure, or frequency. Introduction. The Special Interest Group (SIG) for Underwater
Acoustics (SIGUA) is concerned with the generation, transmission, and
reception of sound in the underwater environment including the
interaction between sound and underwater surfaces and structures. The
principal function of the SIGUA is to provide a forum for researchers,
practitioners and users of underwater acoustics, covering analysis,
modelling, synthesis, and measurement, across all possible underwater
applications.
