2.3. Pyroprobe pyrolysis GC-MS. Conventional analytical pyrolysis was performed with a Chemical Data Systems 160 pyroprobe interfaced to a HP 6890/5973 GC-MS. A small powdered portion (~1-2 mg) of the pure lignin, pure coal and bulk synthetic mix were separately pyrolysed at a temperature of 650°C which was applied for 10 s.

Pyrolysis is the thermal decomposition of materials at elevated temperatures in an inert atmosphere. It involves a change of chemical composition.The word is coined from the Greek-derived elements pyro "fire" and lysis "separating".. Pyrolysis is most commonly used in the treatment of organic materials. It is one of the processes involved in charring wood. In general, pyrolysis of organic ...

Pyrolysis - Wikipedia

Analytical pyrolysis is one of the many tools utilized for the study of natural organic polymers. This book describes in three parts the methodology of analytical pyrolysis, the results of pyrolysis for a variety of biopolymers, and several practical applications of analytical pyrolysis on natural organic polymers and their composite materials.
