Janeway Immunobiology Exam Questions

5.30 Short answer: The evolutionary conservation of two classes of T lymphocytes, those expressing a:b T-cell receptors and those expressing g:d T-cell receptors, argues for important but separate functions of these two classes of T cells. Evolution has also conserved the process of somatic recombination of gene segments that is able to generate an enormous diversity of a:b and g:d T-cell receptor sequences.

### Janeway Immunobiology Questions Answers - ModApkTown

1.16 Short answer: The antibody protein is often depicted as an uppercase letter Y, with the two variable regions (antigen-binding domains) pointing up, and the stem consisting of the Fc region (constant domain). An analogy has been made between an antibody protein and a guided missile, with one type of antibody domain functioning as the guidance system, and the other type of domain as the ' payload. '
