As a physics and astronomy convention, we only want one number to the left of the decimal place, so notice again that  $736 = 7.36 \cdot 100 = 7.36 \times 10^2$ . The mass of the moon, in scientific notation, then, is known to be  $7.36 \times 10^{22}$  kg. With the same method, the mass of the Earth is
