CT perfusion in ischemic stroke has become established in most centers with stroke services as an important adjunct, along with CT angiography (CTA), to conventional unenhanced CT brain imaging.. It enables differentiation of salvageable ischemic brain tissue (the penumbra) from the irrevocably damaged infarcted brain (the infarct core).). This is useful when assessing a patient for treatment ...

Providers often superimpose brain perfusion images with other types of standard imaging tests, such as a computed tomography (CT) scan. This allows them to compare the information from both techniques on one single image. Some types of brain perfusion scans, such as MRI perfusion or CT perfusion, don't need a radiotracer.

Perfusion is the passage of fluid through the lymphatic system or blood vessels to an organ or a tissue. The practice of perfusion scanning, is the process by which this perfusion can be observed, recorded and quantified. The term perfusion scanning encompasses a wide range of medical imaging modalities.
