In Spring ' s approach to building RESTful web services, HTTP requests are handled by a controller. These components are identified by the `@RestController` annotation, and the `GreetingController` shown in the following listing (from `src/main/java/com/example/restservice/GreetingController.java` ) handles GET requests for `/greeting` by returning a new instance of the `Greeting` class:

Building RESTful Web services with Go | Packt  
Building REST services with Spring REST has quickly become the de-facto standard for building web services on the web because they ' re easy to build and easy to consume. There ' s a much larger discussion to be had about how REST fits in the world of microservices, but - for this tutorial - let ' s just look at building RESTful services.
