Distance, speed and time formulae - Distance, Speed and ...
In National 4 Maths use the distance, speed and time equation to calculate distance, speed and time by using corresponding units.

Calculating speed given distance and time - Distance ...
To solve for distance use the formula for distance d = st, or distance equals speed times time. distance = speed x time. Rate and speed are similar since they both represent some distance per unit time like miles per hour or kilometers per hour. If rate r is the same as speed s, r = s = d/t. You can use the equivalent formula d = rt which means distance equals rate times time.

Speed Distance Time Calculator
The formula for distance, if you know time (duration) and the average speed, is: d = v x t where v is the velocity (average speed), t is the time and d is distance, so you can read it as Distance = Speed x Time.

Speed, Distance & Time Calculator - calculate travel speed ...
If you drive a car or have ever flown in an airplane, you 've probably noticed that time, speed, and distance are related. Here 's the basic formula for distance (d), which equals speed (called velocity in science and represented by v) multiplied by time (t):

Calculating Speed, Time, and Distance - dummies
Speed Distance Time - Formula. Speed, distance and time are all related by the formula, s = d/frac{d}{t} where s is speed, d is distance, and t is time. You can rearrange this formula to find the other two, for example, if we multiply both sides by t and divide both sides by s, we get, t = d/frac{d}{s}

Speed Distance Time Questions | Worksheets and Revision | MME
Average speed is measured in units of distance per time, and the average speed formula looks like this: average speed = total distance / total time Typical units are kilometers per hour (kph), miles per hour (mph), meters per second (m/s) and feet per second (ft/s).

Speed, distance, time - Omni Calculator
The formula Time = Distance/Speed is needed here. Distance is 70 miles, Speed is 30mph. Time = 70/30. As with the speed method of calculation, the denominator must fit into 60 minutes. Time = 70/30 = 2.33. 2.33 x 60 = 140 minutes = 2 hours and 20 minutes.
