Cytokines are an important topic of scientific study that continues, but so far, it appears that a healthy diet rich in beneficial nutrients, exercise and stress reduction can all help to encourage a healthy balance of cytokines in the body. It's theorized that cytokines are generally affected by nutritional status. Chronic nutritional deficiencies have a negative impact on our immune response, which includes reductions in the production and activity of cytokines.

Cytokines are a large, diverse family of small proteins or glycoproteins (usually smaller than 30 kDa). Although initially described for their immunomodulatory capabilities, additional roles separate from the immune system in developmental processes are also documented, such as cell differentiation and directed migration.
