Data Input ¶¶ Orange can read files in native tab-delimited format, or can load data from any of the major standard spreadsheet file types, like CSV and Excel. Native format starts with a header row with feature (column) names. The second header row gives the attribute type, which can be continuous, discrete, time, or string.

The Data ¶ Orange Data Mining Library 3 documentation  
from Orange.data import Table from Orange.preprocess import  
Impute data = Table("heart-disease.tab") imputer = Impute()  
impute\_heart = imputer(data) There are several imputation methods  
one can use.

When teaching data mining, we like to illustrate rather than only explain. And Orange is great at that. Used at schools, universities and in professional training courses across the world, Orange supports hands-on training and visual illustrations of concepts from data science. There are even widgets that were especially designed for teaching.

Orange provides two algorithms for induction of association rules, a standard Apriori algorithm [AgrawalSrikant1994] for sparse (basket) data analysis and a variant of Apriori for attribute-value data sets. Both algorithms also support mining of frequent itemsets. For example, consider a simple market basket data:

Inputs. Corpus: A collection of documents. Outputs. Corpus: Preprocessed corpus. Preprocess Text splits your text into smaller units (tokens), filters them, runs normalization (stemming, lemmatization), creates n-grams and tags tokens with part-of-speech labels. Steps in the analysis are applied sequentially and can be turned on or off.
