Distributed computing
is a field of computer
science that studies
distributed systems. A
distributed system is a
system whose

Online Library Distributed

components are located on different networked computers, which communicate and coordinate their actions by passing messages to one another. The components interact with one another in order to achieve a common goal. Three significant characteristics of distributed systems are:

Parallel, Distributed,
and Network-Based

Online Library Distributed

Processing has undergone impressive change over recent years. New architectures and applications have rapidly become the central focus of the discipline. These changes are often a result of cross-fertilisation of parallel and distributed technologies with other rapidly evolving

Online Library Distributed

In this context, several methods and approaches of Distributed Computing are exploited in software and hardware to propose new approaches able to support and analyse the huge amount of collected information and to deal with the control of these emerging networks.
