to its molecular genetics and breeding sections, including discussions of new breeding techniques such as zinc finger nuclease, oligonucleotide directed mutagenesis, RNA-dependent DNA methylation, reverse breeding, genome editing, and others. A new table enables efficient comparison of an expanded list of molecular markers, including Allozyme, RFLPs, RAPD, SSR, ISSR, DAMD, AFLP, SNPs and ESTs. Also, new and updated “Industry Highlights” sections provide examples of the practical application of plant breeding methods to real-world problems. This new edition: Organizes topics to reflect the stages of an actual breeding project Incorporates the most recent technologies in the field, such as CRSPR genome edition and grafting on GM stock Includes numerous illustrations and end-of-

Intricate subject, involving the use of several integrative novel sciences and technologies which developed into business, science and art.

Extraordinary growth in contemporary plant breeding has been witnessed, enriching the conventional breeding practices with accurate, effective, economical and swift breeding tools and approaches as a result of novel advancements in genomics as well as plant genetics and coupling plant "omics" accomplishments accompanied with progresses in computer science and informatics, as well as laboratory robotics. The aim of this book is to describe some of the current developments of 21st century plant breeding, elucidating new approaches, achievements, views, research efforts and perspectives in breeding of some crop species.
