~~Hydrogeochemistry of groundwater depend on several factors. For protection of groundwater quality and development of the resource, it is important to gain a clear understanding of the main factors that influence the chemistry. To study the formation mechanisms of water, Gibbs proposed the well-known Gibbs diagram.~~

~~Evaluation of groundwater hydrogeochemistry and assessment~~

~~Studies of arsenic hydrogeochemistry and mobilization often involve evaluation of numerous factors, and these factors can be analyzed with multivariate statistics to elucidate underlying processes. Processes like carbonate dissolution, silicate weathering, and ion exchange were found to control major-ion chemistry by using the geochemical modeling and principal component analysis [16].~~
