Force. A net force on a body causes a body to accelerate. The amount of that acceleration depends on the body's inertia (or its tendency to resist changes in motion), which is measured as its mass. When Isaac Newton formulated Newtonian mechanics, he discovered three fundamental laws of motion.

Forces Study Guide Newton's Laws & Circular Motion (Topics are highlighted in yellow) 1. For a winter fair, some students decide to build 30.0-kg wooden pull-carts on sled skis. If two 90.0-kg passengers get in, how much force will the puller have to exert to move a pull-cart? The coefficient of maximum static friction between the cart and the snow is 0.15.

External forces are the environmental forces of change and are beyond the control of an organization, but majorly influence an organization's change management strategy. Whereas, internal forces of organizational change are the internal forces of change, which may help an organization in either prospering and remaining ahead of the competition or stay behind the competitive race.

### *Forces | STEM*

There are 3 forces acting at the point. These are:  $F$  and the tension  $T$  in the cable acting toward the car and toward the tree.  $\sum F_x = 0$   $T_2 \cos \theta - T_1 \cos \theta = 0$  Therefore,  $T_1 = T_2 = T$ .  $\sum F_y = 0$   $F - 2T \sin \theta = 0$ . Remember that the angle is small so:
