Functional Specifications Outline Document

A functional specification in systems engineering and software development is a document that specifies the functions that a system or component must perform. The documentation typically describes what is needed by the system user as well as requested properties of inputs and outputs. A functional specification is the more technical response to a matching requirements document, e.g. the Product Requirements Document "PRD". Thus it picks up the results of the requirements analysis stage. On more

Functional specification - Wikipedia

The requirements document should be simple and detail only the features included in the first version of the software 0 even if you plan to expand and add more features in the future.
