As discussed, the main benefit of protons over conventional photon beam radiotherapy is a reduction in integral dose. With intensity modulation, dose conformalities with protons and photons are comparable (assuming a small enough proton pencil beam diameter).

A few weeks ago, we looked at a Brief History of Healing and Regeneration with Electric and Magnetic Fields, Part I.. We saw that the use of electric currents and magnetic fields for healing dates back to ancient times, and that the information-based viewpoint emerging in modern bioelectromagnetics has striking parallels with Tibetan, Jain and Vedic medical traditions, where concepts of energy ...

Photons are quantum particles with the ability to be expressed as particles or electromagnetic waves, which puts biophotons at that junction between physical matter and unmanifest quantum fields, as described in physics, or between mind and body, as described in Ayurveda. Ayurveda, as do many quantum theories, suggests that unified quantum fields are in fact consciousness.

Photon, also called light quantum, minute energy packet of electromagnetic radiation. The concept originated (1905) in Albert Einstein's explanation of the photoelectric effect, in which he proposed the existence of discrete energy packets during the transmission of light. Earlier (1900), the German physicist Max Planck had prepared the way for the concept by explaining that heat radiation is emitted and absorbed in distinct units, or quanta.

This is done to reduce interference from the electrical devices.. The baseline is taken for each individual before they begin their healing, meditation, or energy work. The photomultiplier tube actually measures the increase in photon emissions from the baseline for the individual being tested. Then it is the photomultiplier tube that measures biophotons.

The field of biophotonics is a scientific topic which studies the way that photons of light interact with biological systems. Biophotons are essentially photons that exist in the ultraviolet and low visible light spectrum meaning they are imperceptible to the human eye and neither do they generate heat.

Today we can scientifically explain that light actually plays a central role in healing. Biophysicists are now exploring the many interesting applications which range across such diverse fields as cancer research, non-invasive early medical diagnosis, food and water quality testing, chemical and electromagnetic contamination testing, cell communication, synchronicity, and various applications in biotechnology.

Alongside the well-known solutions of standard beams, elegant Gaussian beams (eGBs) have been presented as alternative solutions to the paraxial wave equation. In this work, we show that the eGBs in cartesian (elegant Hermite–Gauss) and cylindrical (elegant Laguerre–Gauss) coordinates are asymptotically equivalent to pseudo-nondiffracting beams (pNDBs) in the same coordinates (cosine ...
