Describes a variety of ailments and medical conditions, and lists and current treatments that feature enzymes, vitamins, and minerals

Why is eating food in its natural state, unprocessed and unrefined, so vital to the maintenance of good health? What is lacking in our modern diet that makes us so susceptible to degenerative disease? What natural elements in food may play a key role in unlocking the secrets of life extension? These fascinating questions, and many more, are answered in *Enzyme Nutrition*. Written by one of America's pioneering biochemists and nutrition researchers, Dr. Edward Howell, *Enzyme Nutrition* presents the most vital nutritional discovery since that of vitamins and minerals—food enzymes. Our digestive organs produce some enzymes internally, however food enzymes are necessary for optimal health and must come from uncooked foods such as fresh fruits and vegetables, raw sprouted grains, unpasteurized dairy products, and food enzyme supplements. *Enzyme Nutrition* represents more than fifty years of research and experimentation by Dr. Howell. He shows us how to conserve our enzymes and maintain internal balance. As the body regains its strength and vigor, its capacity to maintain its normal weight, fight disease, and heal itself is enhanced.

Reviews the role of enzymes in health and disease, with emphasis on their importance in maintaining our health, disease prevention and their uses in medicine.

This new, enlarged edition of the classic book contains over 400 references to scientific literature that contributed to the formulation of Dr. Howell's revolutionary Food Enzyme Concept. Minor corrections and modifications have been made for greater clarity, and a new glossary of scientific terms has been incorporated to facilitate understanding of the contents. Included in the book is an interview by Viktoras Kulvinskis with Dr. Edward Howell. An extensive new foreword by Viktoras Kulvinskis has been added to this revised and enlarged 3rd edition, as well as a new research appendix at the end. The Foreword adds a very substantial body of recent and updated research to support the food enzyme concept of Dr. Howell and underline the importance of food enzymes.
