This textbook and the WileyPLUS online course is designed for use as both a reference guide and a conceptual resource for students taking ERP-focused courses using SAP. It examines in depth the core concepts applicable to all ERP environments, and it explains how those concepts can be utilized to implement business processes in SAP systems.

Enterprise Resource Planning (ERP), Supply Chain Management (SCM), Customer Relationship Management (CRM), Business Intelligence (BI) and Big Data Analytics (BDA) are business related tasks and processes, which are supported by standardized software solutions. The book explains that this requires business oriented thinking and acting from IT specialists and data scientists. It is a good idea to let students experience this directly from the business perspective, for example as executives of a virtual company. The course simulates the stepwise integration of the linked business process chain ERP-SCM-CRM-BI-Big Data of four competing groups of companies. The course participants become board members with full P&L responsibility for business units of one of four beer brewery groups managing supply chains from production to retailer.

This book is designed for use as both a reference guide and a conceptual resource for professionals working with and around SAP ERP. This material approaches real-world SAP topics using an integrated process perspective of the firm. Inventory and Warehouse Management Processes 8. The Material Planning Process 9. Integrated End-to-End Processes 10. Global Bike Inc. Company History 11. Key Terms & Definitions

This supplement text bridges the gap between the fundamentals of how businesses operate (processes) and the tools that business people use to accomplish their tasks (systems). The authors have developed this text for an introductory MIS or general business course to establish a fundamental understanding of business processes. Business students, regardless of their functional discipline, will be able to apply the real-world concepts discussed in this text immediately upon entering the workforce. As more and more businesses adopt enterprise systems globally, it becomes increasingly important for business schools to offer a process-based curriculum to better reflect the realities of modern business. Given the integration of business operations and enterprise systems, Magal and Word have designed this text to reflect, in a practical and accessible format, how real-world business processes are managed and executed.

This book is about running modern industrial enterprises with the help of information systems. Enterprise resource planning (ERP) is the core of business information processing. An ERP system is the backbone of most companies' information systems landscape. All major business processes are handled with the help of this system. Supply chain management (SCM) looks beyond the individual company, taking into account that enterprises are increasingly concentrating on their core competencies, leaving other activities to suppliers. With the growing dependency on the partners, effective supply chains have become as important for a company's success as efficient in-house processes. This book covers typical business processes and shows how these processes are implemented. Examples are presented using the leading systems on the market – SAP ERP and SAP SCM. In this way, the reader can understand how business processes are actually carried out "in the real world".

Research Paper (undergraduate) from the year 2018 in the subject Computer Science - Commercial Information Technology, grade: A-, German University in Cairo, language: English, abstract: Enterprise Resource Planning (ERP) is a software that consists of a group of applications and tools that aim mainly to monitor business functions, operations and processes across an organization, providing reliable information to different units of the company such as finance and accounting, sales and distribution, human resources and others. In addition, with the daily evolution of information technology, the ERP system has been progressing and building itself for the last two decades, until it took the shape we all know now. On the other hand, Business Process Management (BPM) can be identified as the discipline that reaches for the maximum control and management of organizational structure and format of the business processes, which eventually leads to enhanced business process management. This research paper is exploring the impact of ERP on the effectiveness of business process management by evaluating ERP potential development on business processes and how automation provided by ERP would affect these processes. In addition, this study aims to demonstrate the functionalities of ERP, and their possible positive effect the system may have on business performance, even though some studies argue that not all ERP implementation project succeed. The paper is organized as follows: the first section will discuss ERP's definition, evolution and history, functionalities, the implementation stages of ERP systems, benefits of ERP and the cloud ERP and its types. The second section will discuss the definition of business processes management. In addition, the BPM methodologies including business process architecture, how to make the right choice for methodology and process classification framework. The last section will discuss and explore how investing in ERP can improve BPM by explaining the budget, time and plan needed for ERP systems and business processes re-engineering and system integration to match with the ERP systems. Also this section includes benefits and risks of ERP on BPM by evaluating ERP effectiveness and efficiency and assessing risks.

Welcome to the Proceedings of the 2010 International Conference on Advanced Software Engineering and Its Applications (ASEA 2010) – one of the partnering events of the Second International Mega-Conference on Future Generation Information Technology (FGIT 2010). ASEA brings together researchers from academia and industry as well as practitioners to share ideas, problems and solutions relating to the multifaceted aspects of software engineering, including its links to computational sciences, mathematics and information technology. In total, 1,630 papers were submitted to FGIT 2010 from 30 countries, which includes 175 papers submitted to ASEA 2010. The submitted papers went through a rigorous reviewing process: 395 of the 1,630 papers were accepted for FGIT 2010, while 40 papers were accepted for ASEA 2010. Of the 640 papers were selected for the special FGIT 2010 volume published by Springer in the LNCS series. 32 papers are published in this volume, and 2 papers were withdrawn due to technical reasons. We would like to acknowledge the great effort of the ASEA 2010 International Advisory Board and members of the International Program Committee, as well as all the organizations and individuals who supported the idea of publishing this volume of proceedings, including SERSC and Springer. Also, the success of the conference would not have been possible without the huge support from our sponsors and the work of the Chairs and Organizing Committee.

Maps out how to conduct an integrated ERP audit. Contains sample audit control guidelines, case studies, and audit plans to help the reader understand difficult concepts and get started with their own audit.
