3. ERROR AND UNCERTAINTY. • In engineering the word " error " , when used to describe an aspect of measurement does not necessarily carry the connotation of mistake or blunder (although it can!) • Error in a measurement means the inevitable uncertainty that attends all measurements. • We cannot avoid errors in this sense.

Error analysis (EA) was an alternative to contrastive analysis, an approach influenced by behaviorism through which applied linguists sought to use the formal distinctions between the learners' first and second languages to predict errors.

Error analysis (linguistics) - Wikipedia

Aims of Error Analysis The primary aims of Error analysis are: To identify types and patterns of errors To establish error taxonomy Common difficulties in second language acquisition are to be identified. On this basis, error analysis is supposed to contribute to a comprehensive knowledge and processes of second language acquisition. In addition, results are to be used for the revision of theories of language learning and it also helps to evaluate and improve language teaching.
