In The Triumph of Improvisation, James Graham Wilson takes a long view of the end of the Cold War, from the Soviet invasion of Afghanistan in December 1979 to Operation Desert Storm in January 1991. Drawing on deep archival research and recently declassified papers, Wilson argues that adaptation, improvisation, and engagement by individuals in positions of power ended the specter of a nuclear holocaust. Amid ambivalence and uncertainty, Mikhail Gorbachev, Ronald Reagan, George Shultz, and George H. W. Bush-and a host of other actors-engaged with adversaries and adapted to a rapidly changing international environment and information age in which global capitalism recovered as command economies failed. Eschewing the notion of a coherent grand strategy to end the Cold War, Wilson paints a vivid portrait of how leaders made choices; some made poor choices while others reacted prudently, imaginatively, and courageously to events they did not foresee. A book about the burdens of responsibility, the obstacles of domestic politics, and the human qualities of leadership, The Triumph of Improvisation concludes with a chapter describing how George H. W. Bush oversaw the construction of a new configuration of power after the fall of the Berlin Wall, one that resolved the fundamental components of the Cold War on Washington's terms.

From bank bailouts to austerity, Europe's and Ireland's response to the economic crisis has been engineered specifically to shift the burden of paying for the crisis onto ordinary citizens while investors, financiers, bankers and the privileged are protected. The authors expose the class-based nature of Ireland's crisis resolution.

This book presents a clear overview of the debates that surrounded the making of the 1944 Act, which affected every aspect of education in this country. It gives a detailed account of the tripartite divisions into 'three types of child' that were sanctioned in the reforms of the 1940s. At the same time, it also emphasises the idea of education as a civic project which underlay the reforms and which was such an important part of their lasting authority. The education policies of the past decade and the current attempts to shape a new education settlement need to be interpreted in a long-term historical framework and in particular, in relation to the aims and problems of the last great cycle of reform in the 1940s. This book makes an important contribution to the development of such a framework and the social history of education policy in this country.

This book aims to clarify the present situation of the relations between small island countries and territories on the one hand and the great powers, mainland areas, and mega-islands on the other, and explores how small island countries and territories preserve and build their identity under globalization. This book is divided into five parts. The first part presents papers on issues that are related to Okinawa: the American military presence, the formation of a global human network, and the history of and language revitalization in Okinawa. The second part includes papers on security in East Asia and the Pacific Region: the history of and present issues in international relations within the South and East China Sea areas. The third part presents papers on economic issues and social developments on small islands. The fourth part deals with ocean policies and marine resource management in the Pacific Region by the United States, Australia, and Japan. Finally, the fifth part presents papers on the revitalization of three indigenous languages. All the chapters of the book are based on the achievements of the research project "Towards New Island Studies: The Ryukyus as an academic node between East Asia and Oceania" conducted by the International Institute for Okinawan Studies at the University of the Ryukyus. This 5-year project was funded by the Japanese Ministry of Education, Culture, Sports, Science and Technology and aimed to contribute academically to the creation of sustainable and self-determinable societies in small island regions. This work will be extremely useful and informative for readers in small island countries and territories and for researchers who are interested in small island issues to understand the current situation and who wish to consider effectual and feasible solutions.

This book is an interdisciplinary examination of China's new urban development model and the challenges Chinese cities face in the 21st century. China is in the midst of a historic developmental inflection point, grappling with a significantly slowing economy, rapidly rising inequality, massive migration, skyrocketing housing prices, alarming environmental problems, and strong pushback from the West. In this volume, Western and Chinese scholars in different disciplines offer the clearest look yet at some of the main challenges China faces, including domestic and international contexts, the new urban development model, inclusion and well-being of migrants and their families, and urban sustainability. This book sheds light on China's ongoing development and future directions, and has strong policy implications for anyone interested in the future of China.

With unemployment at historically high rates that show signs of becoming structural, there is a pressing need for an in-depth exploration of this economic injustice. Unemployment is one of the problems most likely to put critical pressure on our political institutions, disrupt the social fabric of our way of life, and even threaten the continuation of liberalism itself. Despite the obvious importance of the problem of unemployment, however, there has been a curious lack of attention paid to this issue by contemporary non-Marxist political philosophers. On Unemployment explores the moral implications of the problem of unemployment despite the continuing uncertainty involving both its causes and its cures. Reiff takes up a series of questions about the nature of unemployment and what justice has to tell us about what we should do, if anything, to alleviate it. The book comprehensively discusses the related theory and suggests how we might implement these more general observations in the real world. It addresses the politics of unemployment and the extent to which opposition to some or all of the book's various proposals stem not from empirical disagreements about the best solutions, but from more basic moral disagreements about whether the reduction of unemployment is indeed an appropriate moral goal. This exciting new text will be essential for scholars and readers across business, economics, and finance, as well as politics, philosophy, and sociology.

With more than 158,000 treaties and some 125 judicial organisations, international law has become an inescapable factor in world politics since the Second World War. In recent years, however, international law has also been increasingly challenged as states are voicing concerns that it is producing unintended effects and accuse international courts of judicial activism. This book provides an important corrective to existing theories of international law by focusing on how states respond to increased legalisation and rely on legal expertise to manoeuvre within and against international law. Through a number of case studies, covering a wide range of topical issues such as surveillance, environmental regulation, migration and foreign investments, the book argues that the expansion and increased institutionalisation of international law itself have created the structural premise for this type of politics of international law. More international law paradoxically increases states' political room of manoeuvre in world society.

This edited volume examines the continued viability of international human rights law in the context of growing transnational law enforcement. With states increasingly making use of global governance modes, core exercises of public authority such as migration control, surveillance, detention and policing, are increasingly conducted extraterritorially, outsourced to foreign governments or delegated to non-state actors. New forms of cooperation raise difficult questions about divided, shared and joint responsibility under international human rights law. At the same time, some governments engage in transnational law enforcement exactly to avoid such responsibilities, creatively seeking to navigate the complex, overlapping and sometimes unclear bodies of international law. As such, this volume argues that this area represents a particular dark side of globalisation, requiring both scholars and practitioners to revisit basic assumptions and legal strategies. The volume will be of great interest to students, scholars and practitioners of international relations, human rights and public international law.

Health care in the United States is more expensive than in other developed countries, costing \$2.7 trillion in 2011, or 17.9 percent of the national gross domestic product. Increasing costs strain budgets at all levels of government and threaten the solvency of Medicare, the nation's largest health insurer. At the same time, despite advances in biomedical science, medicine, and public health, health care quality remains inconsistent. In fact, underuse, misuse, and overuse of various services often put patients in danger. Many efforts to improve this situation are focused on Medicare, which mainly pays practitioners on a fee-for-service basis and hospitals on a diagnoses-related group basis, which is a fee for a group of services related to a particular diagnosis. Research has long shown that Medicare spending varies greatly in different regions of the country even when expenditures are adjusted for variation in the costs of doing business, meaning that certain regions have much higher volume and/or intensity of services than others. Further, regions that deliver more services do not appear to achieve better health outcomes than those that deliver less. Variation in Health Care Spending investigates geographic variation in health care spending and quality for Medicare beneficiaries as well as other populations, and analyzes Medicare payment policies that could encourage high-value care. This report concludes that regional differences in Medicare and commercial health care spending and use are real and persist over time. Furthermore, there is much variation within geographic areas, no matter how broadly or narrowly these areas are defined. The report recommends against adoption of a geographically based value index for Medicare payments, because the majority of health care decisions are made at the provider or health care organization level, not by geographic units. Rather, to promote high value services from all providers, Medicare and Medicaid Services should continue to test payment reforms that offer incentives to providers to share clinical data, coordinate patient care, and assume some financial risk for the care of their patients. Medicare covers more than 47 million Americans, including 39 million people age 65 and older and 8 million people with disabilities. Medicare payment reform has the potential to improve health, promote efficiency in the U.S. health care system, and reorient competition in the health care market around the value of services rather than the volume of services provided. The recommendations of Variation in Health Care Spending are designed to help Medicare and Medicaid Services encourage providers to efficiently manage the full range of care for their patients, thereby increasing the value of health care in the United States.

China's rise as an economic powerhouse raises a number of questions that are the subject of lively debate. How did the country do it? How applicable are the lessons of China's economic reform of the past thirty years to the challenges it faces in the next three decades? What does the detailed pattern of China's success and challenges look like at the sub-sectoral and sub-national levels, and what does this mean for future policy? How will China's role as a global economic player evolve? The Oxford Companion to the Economics of China presents an original collection of perspectives on the Chinese economy's past, present, and future: 99 entries written by the leading China analysts of our time. The topics covered include: the China model, future prospects for China , China and the global economy, trade and the Chinese economy, macroeconomics and finance, urbanisation, industry and markets, agriculture and rural development, land, infrastructure, and environment, population and labour, dimensions of wellbeing and inequality, health and education, gender equity, regional divergence in China, and a selection of perspectives on some of China's provinces. The Editors are four global leaders in Chinese economic analysis and policy who between them have held or hold the following positions: Director General, International Food Policy Research Institute; Co-Editor, China Economic Review; President Chinese Economists Society; Assistant Director of Research at the IMF; Principal Adviser to the Chief Economist of the World Bank; and Professors of Economics at Ivy League Universities.
