12th November 2019. by blake. High Sierra on a Mac Pro 2008, technically the last officially supported version of macOS for the Early 2008 Mac Pro is El Capitan. However this does appear to be a software cutoff point rather than an issue with the hardware required to run it. There are a large group of older Macs that have fallen foul of this cutoff (most of them being released in and around 2008), thankfully a rather enterprising Mac Rumors user going by the name of dosdude1 has written a ...

I just completed an upgrade of my 2x quad 2.8 early 2008 MP3,1 to the 3.2GHz models. I spent \$190 shipped on a matched pair from eBay, to me this finally hit a price point low enough to be justifiable to breathe a little more life into this machine before I consider getting the new model Mac Pro, perhaps I will wait until it hits the next revision before picking one up.
