January 01, 2010. This volume contains a collection of stratigraphic and diagenetic case studies of Mesozoic and Cenozoic carbonate sequences from the Tethyan realm. High levels of industry and academic interest in the region have generated numerous multi-disciplinary studies of these sequences, a selection of which are presented in this volume. The studies presented are based on both comprehensive subsurface datasets from important hydrocarbon-bearing strata of the Middle East and the ...

The goal of this conference was to investigate the potential to develop age or architecture specific reference models for carbonate systems and reservoirs similar to those successfully developed for siliciclastic systems. The conference focused on the Mesozoic and Cenozoic carbonate sequences of the Mediterranean and Middle East.

High sea levels resulted in extensive shallow-water carbonate accumulation in epicontinental seas during parts of the Phanerozoic, notably during the Carboniferous and Cambrian (Hay, 1985; Opdyke and Wilkinson, 1988; Walker et al., 2002), while pelagic carbonate burial was insignificant until the evolutionary success of coccolithophores and planktonic foraminifera in the Mesozoic (Martin, 1995 ...

However, this scheme does not encompass all the modern carbonate depositional systems, such as platforms, and is difficult to apply to Cenozoic carbonates. For example, the Paternoster Platform, of Southeast Kalimantan, is characterised by extensive areas below 30 m water depth where larger benthic foraminifera dominate, and coral reefs are developed only along the northern and eastern margins ...

The Cenozoic Era. 66.4 Million Years Ago to now. The Cenozoic Era is divided into two parts, the older and longer lasting Tertiary Period and the Quaternary Period in which we live now. These Periods are in turn subdivided into Epochs, based on the changing life patterns of the times. The Tertiary Period 66.4-1.6 Million Years Ago

Paleozoic, Mesozoic, and Cenozoic refer to the three main eras of complex multicellular life on Earth -- in Greek, the words mean "ancient life," "middle life," and "new life." The Paleozoic stretches from 542 to 251 million years ago, the Mesozoic from 251 to 65.5 million years ago, and the Cenozoic from 65.5 million years ago to the present.

**What do Paleozoic, Mesozoic, and Cenozoic Mean?**

noun. Geology: the MesozoicThe era between the Palaeozoic and Cenozoic eras or the system of rocks deposited during it. More example sentences. 'the history of mammals extends back to the early part of the Mesozoic'. The Mesozoic lasted from about 245 to 65 million years ago.

The Mesozoic Moroccan carbonate platforms and associated siliciclastic deposits located on the High and Middle Atlasic System develop during five main periods. The two Jurassic models selected for the Early-Mid Liassic and Dogger periods indicate unstable platforms developing north eastward in the Tethyan Sea.
