Experimental organic chemistry a miniscale approach|

Traditionally, experiments in organic chemistry are carried out on a macroscale level, employing quantities of chemicals on the order of 5-100 g, using glassware designed to contain between 25 and 500 mL of liquids. For quantities of materials in the 0.005-0.5 gram range, one employs different, "microscale" techniques and equipment in order to carry out the various standard organic laboratory ...
