Due to the recent changes in the user interface I had no idea how to add a new tester to a existing build. I accidently clicked on 'Expire Build' thinking it to be similar to the previous 'Stop Testing' functionality. However that build got expired and now it does not appear in the TestFlight section. It does show up in the 'Activity'.

Article updated 03/16/2020 TestFlight is a free solution provided by Apple to test an iOS app before it is released on the App Store. It's an alternative you may consider if testing your app with the Ad Hoc version or with My GoodBarber App is not an option for the project you're working on. From what I saw so far, TestFlight can be useful for some resellers when making iOS apps for clients.

It's been almost a year since Apple re-launched TestFlight. Apple had acquired TestFlight in 2014, and the much-anticipated announcement at WWDC gave many in the industry hope that TestFlight would spell the end for the numerous headaches associated with development builds and beta distributions. So where does TestFlight stand a year later? Has it lived up to these hopes?
