Volumetric Analysis is a widely used quantitative analytical method. It involves the measurement of volume of a solution of known concentration which is used to determine the concentration of the analyte. This process is called titration and the solution in the buret is called titrant. It is done by meaning the volume of a standard solution of an appropriate reagent whose precise concentration is already known.

TOP 250+ Volumetric Analysis Interview Questions and ...
Volumetric Analysis (Acids and Bases) A student carried out four titrations between an acid and a base. The volumes of acid required to neutralise the base were recorded and were as follows: 19.6 cm³, 19.5 cm³, 19.3 cm³, 19.3 cm³. When performing his calculations, what value for volume of acid should he use?
