Things you can do at home to help with bedwetting. Do give your child enough water to drink during the day. make sure your child goes to the toilet regularly, around 4 to 7 times a day, including just before bedtime . agree with your ...

**Bedwetting in children—NHS**

Nocturnal enuresis is defined as involuntary urination during the night, after an age when bladder control should be established. It is more common in children, but adult bedwetting is not rare – or anything to be ashamed of. There are two kinds of enuresis: primary and secondary. The former refers to bedwetting since birth. Secondary is a condition that develops after you know how to ...

**What Causes Bed-Wetting in Adults, and How Can You Treat It?**

Bed-wetting — also called nighttime incontinence or nocturnal enuresis — is involuntary urination while asleep after the age at which staying dry at night can be reasonably expected. Soggy sheets and pajamas — and an embarrassed child — are a familiar scene in many homes. But don't despair. Bed-wetting isn't a sign of toilet training gone bad. It's often just a normal part of a child's ...
