A two-stroke engine is a type of internal combustion engine that completes a power cycle with two strokes of the piston during only one crankshaft revolution. This is in contrast to a "four-stroke engine", which requires four strokes of the piston to complete a power cycle during two crankshaft revolutions. In a two-stroke engine, the end of the combustion stroke and the beginning of the compression stroke happen simultaneously, with the intake and exhaust functions occurring at the

same time. T

~~Two stroke engine - Wikipedia~~

An engine which completes four strokes into one power stroke or to complete one cycle is called four stroke engine. The crankshaft completes one revolution in two strokes. So it rotates two

revolution in four strokes engines.

### ~~Rotax 2 stroke Aircraft Engine parts - Eccleston Aviation~~

A two stroke engine is simpler in construction and mechanism. There is no valve and valve mechanism in it. The ports are easy to design and they are cover and uncover by the movement of the piston itself. It has high mechanical efficiency due to the absence of cams, crankshaft and rockers, etc., of the valves.

2 Stroke / 4 Stroke Engine = 2/4 + Stroke + Engine. A four-stroke engine in a nutshell is a cylinder-piston assembly in which power is produced in just one of the four strokes. It ' s a heavier complex design that is more fuel-efficient and produces less pollution.

Similarly, a two-stroke engine is a cylinder-piston assembly in which power is ...
