She loved astronomy and joined the BAA as soon as she could and continued to work as her husband's assistant. She specialised in solar observing. She plotted sunspots through two solar cycles and was the first to identify the pattern we call the butterfly diagram, where sunspots early in the solar cycle form nearer the poles, but they form nearer and nearer to the equator as the cycle ...

After sunset and most of the night. Mars is visible during most of ...

Night Sky Map & Planets Visible Tonight in Oxford

The Philip Wetton telescope is a fantastic resource for teaching in Oxford, and for local schools and colleges. The 0.4 metre telescope, built in 1995 by the Meade Corporation of California, was given to the University so that undergraduate and graduate students could observe the night sky as would a professional astronomer.

The position of Savilian Professor of Astronomy was established at the University of Oxford in 1619. It was founded (at the same time as the Savilian Professorship of Geometry) by Sir Henry Savile, a mathematician and classical scholar who was Warden of Merton College, Oxford, and Provost of Eton College.

Savilian Professor of Astronomy - Wikipedia

Physics at Oxford is challenging and mathematical with a strong emphasis on fundamental concepts such as optics and relativity. There are two undergraduate courses, an MPhys and the BA. All applicants apply for the four-year MPhys in the first instance.
