For many, the idea of prefab housing may bring to mind trailers and other less desirable images of home life. But this idea couldn't be more wrong! Rather, the newest trends in prefab have emerged as a great way for a design- (and cost-) conscious generation to achieve the dream of home ownership. Today, prefab houses are manufactured to the highest standards of construction and aesthetics. And with the internet, these houses can be ordered from all over the world--affording people everywhere the opportunity to acquire an affordable home of distinction. Prefab Modern explores the best prefabricated houses on the market today, from all over the world along with a resource directory on how you can purchase them. Included are case studies from all over the US and around the world, from top architects and designers. Prefab is the inevitable next step to "cool" housing as the market looks for reasonably priced housing for first and second homes. Prefab Houses Designsource is the perfect guide to this undeniable and fascinating trend.

Prefabricated housing of high design and quality construction has long been an elusive goal for architects, where industry practices, bureaucratic regulations, and cost have always stood in the way— until now. The New York –based firm Resolution: 4 Architecture is revolutionizing prefab housing with their Modern Modular design system. Home designs based on modules of use intended for communal or private spaces are mixed and matched to achieve an infinite number of designs suited to each buyer's site, budget, and lifestyle. Modern Modular, the first book on the critically acclaimed firm, presents fourteen beautifully photographed case studies illustrating each step in their prefab system—from design and fabrication to transportation, siting, and final construction of distinctively modern and surprisingly affordable new homes.

As the need for affordable, eco-friendly housing continues to rise, so does the bar for attractive, easy-to-construct designs from today's architects. In A House in a Week: Prefab Houses we've gathered the most innovative and thoughtfully planned homes, prefabricated to perfection. From a desert oasis in Nevada to a tucked away tree house in Cabo da Roca, these international styles artfully combine elegance with convenience.

Prefab takes a look at prefabricated housing's fascinating history and imagines its promising future by presenting a group of innovative homes and concepts from over 30 contemporary architects and designers including Shigeru Ban, Thomas Sandell, David Hertz, Greg Lynn, and KFN.

Prefabulous and Sustainable dispels the negative myths associated with prefab homes and shows the reader how beautiful and remarkably green prefab homes are. In this guide to prefab home-building author Sheri Koones, demystifies the prefabricated house by using 25 unique homes to showcase how factory-built homes are greener, more efficient, sturdier, and more cost-effective than site-built homes. The book is divided into 3 categories—green, greener, greenest—and the homes featured vary in style, design, type of construction, and size. All of the homes included in Prefabulous and Sustainable have been customized to create a level of sustainability beyond the inherent qualities of prefab. Written in an easy to understand and approachable style, author Sheri Koones walks the readers through each of the homes, explaining the materials, strategies, and systems used to create a sustainable living environment. Photographs, captions, floor plans, and sidebars illustrate to readers that green living is not as complicated as one might think, and attainable for everyone. Also included is a resource guide, making this book a hand-on guide for homebuilders. Praise for Prefabulous + Sustainable " Authoritative and beautiful. Once again, Koones builds her case for pre-fab thoroughly, and presents it in a compelling, well-organized package. " —Allen Norwood, NAREE Book Competition Head Judge

Contemporary prefab design is on the rise, becoming more and more popular every day. Is it a wonder why? Once blasted as a cheap building system that harkened back to the days when homeowners could order a home from the Sears, Robuck &Co. catalogue, contemporary prefab has blossomed into a viable industry that has created an unmatched enthusiasm for better living standards in today's modern world. An ever-increasing body of talented architects and designers, including the many practitioners showcased within this book are striving to make prefab the next revolution in residential architecture. The projects are presented in alphabetical order of the respective architects and designers. An index with contact information is enclosed.

"Prefab home construction has arrived. The benefits of [building] a prefab home (they are better built, use resources more efficiently, and are healthier to live in) apply just as well to vacation homes as they do to primary residences. [This book] explores the beauty, variety, design, and environmentally positive benefits of prefab construction through the wide variety of prefabrication methods in use today and with prefabulous examples from across the country"--Amazon.com.

The amazing history of prefabricated houses started in England in the 1830rsquo;s with a building kit for emigrants moving to Australia. Even today, prefabricated houses provide a high percentage of living spaces in many countries of the world. This book covers prefabs from the USA via Europe to Asia and Africa, giving insight into the various industrially prefabricated components, the difficulties of delivery to the building site, and the intricacies of assembly and completion. As well as tracing the link between modernism and industrialization that evolved to produce the latest prefabricated solutions, it also features a unique compilation of one-off prefabricated houses by well-known international architects, as well as successful dwellings manufactured off-site for everyday modern living.

IN PREFAB GREEN, architect Michelle Kaufmann shares her vision of creating thoughtful, sustainable design for everyone. Her firm, Michelle Kaufmann Designs, blends sustainable home layouts, eco-friendly materials, and low-energy options to create a "prepackaged" green solution to home design. Kaufmann tells about five eco-principles that are present in every design her firm creates-smart design, eco-materials, energy efficiency, water conservation, and healthy environment-and how each work together to create homes that make a difference. Michelle Kaufmann founded Michelle Kaufmann Designs in 2002. Michelle's work is widely published and her homes have been showcased in a number of museums including the National Building Museum, the Vancouver Art Center, MOCA in Los Angeles, and Chicago's Museum of Science and Industry. Michelle lives in Marin County, California. Cathy Remick has worked as a staff architect and designer for several national firms in San Francisco and Washington, D.C. She is a design manager for mkStudios. She lives in Orinda, California.

At the end of the Second World War Winston Churchill promised to manufacture half a million prefabricated bungalows to ease the housing shortage; in the end more than 156,000 temporary 'prefabs' were delivered. Nicknamed 'Palaces for the People', and with convenient kitchens, bathrooms and heating systems, they proved popular and instead of being demolished as intended they were defended by residents who campaigned to keep their family homes and communities. Nearly seventy years later, as the last of these two bedroom homes are being demolished, Elisabeth Blanchet tells the story of these popular dwellings and their gardens and shows the various designs that were produced. Through the stories and memories of residents, she also reveals the communities who were pleased to live in the prefabs.
