Ratio and Proportion Problems and Solutions

A proportion is simply a statement that two ratios are equal. It can be written in two ways: as two equal fractions a/b = c/d; or using a colon, a:b = c:d. The following proportion is read as "twenty

is to twenty-five as...

Ratio and Proportion - Aptitude
Questions and Answers

Let us write the proportion with the
help of the 10/20 ratio from above:? 42
= 10 20. Now we solve it using a
special method: Multiply across the
known corners, then divide by the third
number. And we get this:? = (42 × 10)

/ 20 = 420 / 20 = 21. So you should draw the head 21 long.

## Proportions - MATH

When two ratios are equal, they make a proportion, i.e. if $a/b = c/d$, then a, b, c and d are in proportion. This is represented as a:b :: c:d. When a, b, c

and d are in proportion, then a and d are called the Extremes and b and c are called the Means, also Product of the Means = Product of the Extremes i.e. bc = ad.

Quants - Ratio and Proportion Questions with Explanations

Introduction to Proportion. A lot of questions on ratio are solved by using proportion. Definition & Notation. ... Answer: This question has 3 parts. In the first part, there is 20% of bleach in 20 L of solution �a 4 L of bleach in 16 L of water = 20 L of solution. Let⫾s note the details in a table for better clarity

and understanding.
