Salesforce Apex Documentation

Apex is like Java for Salesforce. It enables you to add and interact with data in the Lightning Platform persistence layer. It uses classes, data types, variables, and if-else statements. You can make it execute based on a condition, or have a block of code execute repeatedly.

Apex - Salesforce Developers Documentation

Apex is a strongly typed, object-oriented programming language that allows developers to execute flow and transaction control statements on Salesforce servers in conjunction with calls to the API.

Introducing Apex | Apex Developer Guide | Salesforce ...

Apex code is the first multitenant, on-demand programming language for developers interested in building the next generation of business applications. Apex revolutionizes the way developers create on-demand applications.

Apex Developer Guide - Salesforce Developers Documentation

Apex is designed to thread together multiple query and DML statements into a single unit of work on the Salesforce server.

Developers use database stored procedures to thread together multiple transaction statements on a database server in a similar way.

Salesforce Documenter aims at facilitating properly structured code documentation for Salesforce-related files by automating related tasks such as generating & maintaining File and Method headers. SFDoc can be adopted as a project-wide and/or team-wide standard, in an effort to encourage, and eventually enforce, proper code documenting.

Salesforce Documenter - Visual Studio Marketplace

Salesforce takes abuse situations very seriously. Examples of abuse include but are not limited to posting of offensive language or fraudulent statements. To help us process your request as quickly as possible, please fill out the form below describing the situation. For privacy and security reasons, the final outcome of an abuse case may not be revealed to the person who reported it.

javadoc for apex - Ideas - Salesforce Trailblazer Community

Salesforce Apex app example with WebViewer Each Salesforce record is represented as a sObject before it is inserted into Salesforce. Likewise, when persisted records are retrieved from Salesforce, they're stored in a sObject variable. Standard and

custom object records in the Salesforce map to their sObject types in Apex.

Create PDF Viewer App in Salesforce with Apex | PDFTron
Simple Salesforce is a basic Salesforce.com REST API client built for Python 3.5, 3.6, 3.7 and 3.8. The goal is to provide a very low-level interface to the REST Resource and APEX API, returning a dictionary of the API JSON response. You can find out more regarding the format of the results in the Official Salesforce.com REST API Documentation
