Software documentation most commonly used in Agile projects. All software documentation can be divided into two main categories: Product documentation; Process documentation; Product documentation describes the product that is being developed and provides instructions on how to perform various tasks with it. In general, product documentation includes requirements, tech specifications, business logic, and manuals.

Technical Documentation in Software Development: Types *---*

Documentation in software engineering is the umbrella term that encompasses all written documents and materials dealing with a software product's development and use. All software development products, whether created by a small team or a large corporation, require some related documentation.

Software Documentation Types and Best Practices *+* *by* *---*

Software documentation is written text or illustration that accompanies computer software or is embedded in the source code. The documentation either explains how the software operates or how to use it, and may mean different things to people in different roles. Documentation is an important part of software engineering.

Software documentation *—* *Wikipedia*

Software documentation is a large field to communicate with different stakeholders with different information needs. This topic introduces to the basics of documenting a project with a wiki. Create your Software Documentation Space

How to document a Software Development Project

A software design document (also known as a software design specification or technical specification documents) is a written report of a software product describing its overall architecture. Such documents are usually written by software designers or project managers and are given to the software development team to give them an overview of what needs to be built and how.

Software Design Document: What, Why and How? *(Template* *---*

Software documentation turns your software into a glass box by explaining to users and developers how it operates or is used. You've probably seen documentation before, but if you need a refresher, here's an example from Slack 's API: As you can see, Slack explains everything about its API in excruciating detail.

18 Software Documentation Tools that Do The Hard Work For *---*

Without documentation, software resembles a black box. It is useful and it probably gets the job done, but it can't be altered based on your needs. Even the best-written software can turn useless if other developers or users are unable to understand it. Documentation is what turns your black box into a glass box.

15 *—* **Software Documentation Tools That Will Save the Day** *---*

Good software documentation, whether a specifications document for programmers and testers, a technical document for internal users, or software manuals and help files for end users, helps the person working with the software understand its features and functions.

How to Write Software Documentation: 8 Steps *(with Pictures)*

A high-level design document (HLDD) describes the architecture used in the development of a particular software product. It usually includes a diagram that depicts the envisioned structure of the software system. Since this is a high-level document, non-technical language is often used. What is in a software design document?

How to Write Software Design Documents *- With Examples* *+* *Topical*

Agile documentation is an approach to create concise documents that serve the situation at hand. In traditional software development projects, there is comprehensive documentation which is perceived as a risk reduction strategy.

Agile Documentation *—* **6 Hacks for Documenting in Agile** *---*

A software requirements document (also called software requirements specifications) is a document or set of documentation that outlines the features and intended behavior of a software application.

Nailing Your Software Requirements Documentation *---*

Documentation is usually handled during the final phases of the project, along with testing and quality assurance (QA). This approach doesn't work with agile. If you wait until the product is nearly done to start documentation, QA might spot bugs that require last-minute revisions to the software.

Best documentation practices in agile software development

Documentation is as much a part of the system as the source code. Your team's primary goal is to develop software, its secondary goal is to enable your next effort. The benefit of having documentation must be greater than the cost of creating and maintaining it.

Agile Lean Documentation: Strategies for Agile Software *---*

For the documentation of software architectures the free template Arc42 is widely used, for the system overview one can be inspired by the specification templates Volere or IEEE 830. Unfortunately, the complete versions of these two templates are no longer for free, but the linked Wikipedia articles give a good overview of the template structures.
