Difference Between Soil Fertility and Productivity ...

Soil fertility is a complex quality of soils that is closest to plant nutrient management. It is the component of overall soil productivity that deals with its available nutrient status, and its

Read Book Soil Fertility And

ability to provide nutrients out of its own reserves and through external applications for crop production.

Chapter 4 Soil fertility and crop production

Soil Fertility is influenced by the physical, chemical

Read Book Soil Fertility And

and biological factors of the soil. Soil Productivity depends upon fertility and location. 3. Soil Fertility is the function of available nutrients of the soil.

Difference between
Soil Fertility and
Productivity

Read Book Soil Fertility And

Soil productivity encompasses soil fertility plus the inherent and management-related factors affecting plant growth and development. It is generally measured in terms of inputs versus outputs, which for agronomic

Read Book Soil Fertility And

situations generally refers to water and/or nutrient input versus crop yield.
