Determine the bracing requirements for a 22 ft (6.71 m) tall wall constructed with 8 in. (203 mm) concrete masonry having a density of 110 lb/ft3(1762 kg/m) and reinforced with No. 5 bars at 32 in. (M#16 at 813 mm) o.c. using 30 in. (762 mm) splice lengths (i.e., 48 bar diameters).

BRACING CONCRETE MASONRY WALLS UNDER CONSTRUCTION TEK 3-4C

In 1999, the Council introduced the Standard Practice for Bracing Masonry Walls Under Construction, or Standard Practice. This Standard Practice lessens the risk of lost production, loss of money and most importantly, the potential loss of life. First and foremost, the Standard Practice establishes life safety as its principle goal. From a practical point of view, it recognizes that ? under some rare circumstances ? it is impossible to prevent walls under construction from blowing down.

Bracing Masonry Walls - Mason Contractors

1) Incorporate the Standard Practice as a contractual requirement in your design. 2) Require foundation dowels to have a minimum projection adequate for a full lap splice as defined in the Standard Practice (48 bar diameters). 3) Require all lap splices to be a minimum of 48 bar diameters. 4) If unwilling to do items 2&3, at least allow the mason
