The Sumatra Earthquake and Tsunami December 26, 2004

The 1907 Sumatra earthquake occurred on January 4 at 05:19:12 UTC. The estimated magnitude is 7.5–8.0 Ms, with an epicentre close to Simeulue, off Sumatra. It triggered a widespread and damaging tsunami that caused at least 2,188 deaths. The low observed intensity compared to the size of the tsunami has led to its interpretation as a tsunami earthquake. Higher levels of shaking observed on Nias are attributed to a large aftershock, less than an hour later. The tsunami gave rise to the S ...

1907 Sumatra earthquake — Wikipedia

Make the "Runups, Distances, and Times" folder visible (checked), if it isn't already. Runups are reported as heights, and sites where runups have been reported for this tsunami are displayed as a fat red H (there are lots). The highest runup value reported for this tsunami occurred at Labuhan, on the northwest coast of Sumatra.
