A Look at the History of Vertical Farming | by Mark ...

Vertical farming is the practice of growing crops in vertically stacked layers. It often incorporates controlled-environment agriculture, which aims to optimize plant growth, and soilless farming techniques such as hydroponics, aquaponics, and aeroponics. Some common choices of structures to house vertical farming systems include buildings, shipping containers, tunnels, and abandoned mine shafts. The modern concept of vertical farming was proposed in 1999 by Dickson Despommier, professor of Publ
