Topley and Wilson's Microbiology and Microbial Infections, 10th Edition continues a tradition of providing the most comprehensive reference available on microorganisms and the resulting infectious diseases. Comprising 8 volumes, including a comprehensive index, Topley & Wilson will be a valuable reference tool for medical microbiologists, immunologists, infectious disease specialists, pathologists, travel and tropical medicine specialists, and public health scientists. This series of volumes is also a standard reference for those working in the pharmaceutical industry, trainees in every discipline, and laboratory technicians. The breadth of information available is impressive and will support academic and clinical practice for several years to come.

For the first time, each volume stands alone as an example of the best writing in the fields of bacteriology, immunology, mycology, parasitology and virology. Together they work as a set - answering every conceivable query in this vast and growing field

The practical need to partition the world of viruses into distinguishable, universally agreed upon entities is the ultimate justification for developing a virus classification system. Since 1971, the International Committee on Taxonomy of Viruses (ICTV) operating on behalf of the world community of virologists has taken on the task of developing a single, universal taxonomic scheme for all viruses infecting animals (vertebrate, invertebrates, and protozoa), plants (higher plants and algae), fungi, bacteria, and archaea. The current report builds on the accumulated taxonomic construction of the eight previous reports dating back to 1971 and records the proceedings of the Committee since publication of the last report in 2005. Representing the work of more than 500 virologists worldwide, this report is the authoritative reference for virus organization, distinction, and structure.

This volume is based on the 10th International Nidovirus Symposium: Towards Control of SARS and other Nidovirus Diseases. The volume includes articles by all of the major contributors to this burgeoning area of research which summarize the work presented at the meeting. This represents the only comprehensive book to cover this field in the last five years.
