Poverty and social exclusion are also of course a focus of ongoing research efforts and knowledge exchange. This comprehensive text combines theoretical and applied discussions to provide a guide to research for social policy and social work.

The overall purpose of this text is to introduce beginning researchers to the study of educational and social policy, how it has been examined from a scholarly perspective, and the salient issues to consider in conceptualizing and conducting policy research. The emphasis is on "introduce," as the various policy fields within the public sector (for example, education, energy, health, labor) are much too diverse to include in depth in a single volume on theoretical concepts and research methods. The focus is not so much on the substance of policymaking as on understanding the interplay between how policy is made

and implemented and the various conceptual approaches and methods researchers can use to frame and conduct policy studies. The underlying assumption is that a critique of the substantive, theoretical, and methodological issues involved in studying policy can help researchers conduct policy studies that are more informative in guiding policy development and more effective in assessing the impact of policy reforms. *Part I acquaints readers with substantive issues and challenges related to the study of the policy process, and includes chapters on federalism and policymaking, and on studying policy development, implementation, and impact. *Part II examines different conceptual frameworks and theories for the study of policy, with chapters on political culture and policymaking, the punctuated-equilibrium theory and the advocacy coalition framework, economic and organizational perspectives, and new approaches (e.g., feminism, critical theory, postmodernism). *Part III focuses research methods for studying policy, covering research design, qualitative methods, multilevel methods for policy research, and growth modeling methods for examining policy change. *Part IV compares the diversity of approaches used by policy scholars with respect to their strengths and weaknesses, and presents a number of issues for further consideration in conducting policy research. This introduction to theories and methods of conducting policy research is intended to give prospective researchers an appreciation of the relationship among policy problems, empirical methods, and practice, and to contribute to building their skills in conceptualizing and conducting policy research that answers important questions. The text includes examples of studies to illustrate the diversity of methodological techniques, and discusses issues related to the design and conduct of original educational policy studies. *Studying Educational and Social Policy: Theoretical Concepts and Research Methods* is designed primarily for graduate courses in educational policy and educational research and is appropriate as well for research methodology courses in other disciplines, including statistics and research methodology in the social sciences, organizational

In 1991 the Economic and Social Research Council (ESRC) published "Postgraduate Training Guidelines". Throughout the document emphasis is placed on the need for universities to make postgraduate research students aware of the methodological issues that affect their work.; This text explores the relationship between knowledge, methodology and research practice across the broad spectrum of the social sciences in language that is accessible to researchers at all levels of their research careers. It follows the themes that there is no single practice or correct methodology, and that the diversity and variety in terms of methodology and disciplinary focus are a sign of the sophistication and complexity of the processes of social research. The text examines socio-cultural contexts of social research and relates them to contemporary shifts in focus such as feminism, critical theory and postmodernism. The importance of selecting the research methodology most appropriate to the subject discipline concerned is emphasized.

Social work students need to understand the relationship between research, knowledge and practice to be effective practitioners.
