The Unix Shell When you log into UNIX/LINUX system, then it starts a program called the Shell. It provides you with a working environment and interface to the operating system. Usually there are several different shell programs installed. The shell program bash is one of the most common ones.

Linux Basics - Manuals

Adding new user accounts in Unix. To create a basic Unix user account with default settings, you need to know only one thing: the username. The reason I say it as one word is because username (quite often referred to as “ login ”) is not the actual name of the new person gaining access to your Unix system, but rather a single keyword uniquely identifying this user in your system.

How To Create User Accounts in Unix

This guide was created as an overview of the Linux Operating System, geared toward new users as an exploration tour and getting started guide, with exercises at the end of each chapter.
