Inspection Procedure—QRegan's

The inspection of reciprocating engine parts during overhaul is divided into three categories: visual, structural NDT and dimensional. Many defects on the engine components can be detected visually, and a determination of airworthiness can be made at this time. the component is determined to be unairworthy, no further inspection or repair is required.

Inspection Process During Aircraft Reciprocating Engine—

The inspection procedure involved using a video borescope to inspect internal engine parts (Drury and Watson, 2000). Inspectors viewed a video monitor as they searched for internal engine defects. At one facility, the engines were separated from the aircraft, while at the other, the engines were inspected while still mounted under the wing.
